

LOR 30B – run sheet

MicroChem (MCC) – now Kayaku Advanced Materials

nanyte.com/photoresists/lor-30b · last updated 2026-09-12

Thickness: 1.6–4.3 μm

Develop: Developer No specific commercial developer product is named for this grade; the datasheet states LOR/PMGI is compatible with both metal-ion-free (TMAH) and metal-ion-bearing developer chemistries.
